***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 5, lines 12-15, the recitation, “such as a command signal or an address signal” and “such as a refresh operation” are indefinite because the intended scope of the claim is unclear.

Regarding claim 8, last two lines, the recitation, “the CMOS buffer to operate in other cases” are indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Taguchi (US 6,480,030 B1).

Regarding claim 3, Taguchi discloses, at least in Fig. 7, an input buffer circuit comprising:

a first input buffer (60) for receiving an external input signal (INPUT SIGNAL) applied from an external of a semiconductor device;

a second input buffer (50) for receiving an external reference voltage (Vref) and the external input signal; and

a control means (LP, 58, 59) for selecting the first input buffer when a mode of the semiconductor device is in a standby mode (low-speed mode; col. 9, lines 8+) and selecting the second input buffer when the mode semiconductor device is in an active mode (high speed mode; col. 8, lines 63+).

Regarding claim 4, Taguchi discloses, at least in Fig. 7, that the first input buffer CMOS buffer (60), and the second input buffer is a differential input buffer (50).

#### ***Allowable Subject Matter***

Claims 1-2 are allowed.

Claims 6-10 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
